

**SERIES DB**  
**DENTAL MULTICHANNEL**  
**MANIFOLD**

# SERIES DB MODULAR DESIGN ASSEMBLY

The Series DB is a modular and compact solution, optimising pneumatic, hydraulic and electrical connections – reducing installation times on machines operating in the industrial and life sciences sectors.

The concept behind the manifold gives multiple modules maximum configuration versatility, combining miniature solenoid on-off valves and proportional control valves.

Each single manifold is configurable in several ways to match the operating requirements of each handpiece installed on the dental units.

For example, with the proper configuration, it is possible to optimise the connections of the air and water tubing used for the operation with turbines, micromotors, scalers and syringes.

Manifold configuration for the connection of **ultrasonic scalers**

Manifold configuration for the connection of **electric micromotors**

Manifold configuration for the connection of **pneumatic micromotors and turbines**

## BENEFITS

Easy to install

Modular

Configuration flexibility

Compact and light design

# Designed to be flexible

## Modularity

The manifolds can be quickly and simply assembled

## Plugs for valve positions

"Closed version" plug

"Open version" plug

## Integrated flow regulators

- "Short" flow regulator for factory settings. Normally used for the regulation of the **Air Drive**.
- "Long" flow regulators accessible to the dentist. Normally used for the regulation of **Air** and **Water Spray**.

## Connections for external flow regulators

Hose barb fittings in 303 stainless steel material suitable for I.D. tubing  $\varnothing$  1.6 mm

## Fixing holes

Located on the bottom and on the front of the manifold

## Flow direction

The standard direction of flow is from the lateral port to the frontal ports. It is possible to configure the manifold in order to reverse the direction of flow

## Accessories

### Connection fittings

- Manifold interconnection nipples
- Hose barb fittings I.D. tubing  $\varnothing$  1.6 - 3 - 4 mm
- Threaded M5 female fittings for input and output ports
- Plugs for input and output ports

### Angled element

Made of acetal resin (POM), the angled element allows the input ports of the manifold to turn through 90°

## General data

TECHNICAL FEATURES			
Valve function	2/2 N.C.	2/2 proportional	2/2 proportional
Operation	direct acting poppet type		
Pneumatic connection	hose barb fittings for I.D. tubing Øi 1.6 - 3 - 4 mm / M5 threaded		
Valve orifice diameter	1.6 mm	1.6 mm	2.0 mm
Flow coefficient kv (l/min)	0.6	0.9	1.1
Nominal flow (air @ 6 bar free flow)	55 NL/min	83 NL/min	87 NL/min
Operating pressure	6 bar	6 bar	5 bar
Operating temperature	0 ÷ 50 °C		
Media	filtered air class 5.4.4 according to ISO 8573-1, inert gas, potable water	filtered air class 5.4.4 according to ISO 8573-1, inert gas	
Installation	in any position		

MATERIAL IN CONTACT WITH THE MEDIUM			
Manifold and valve body	POM		
Seals	EPDM	FKM	FKM
Valve internal parts	IXEF - stainless steel 303 - 430	brass - stainless steel 303 - 430	
Fittings	stainless steel 303		

ELECTRICAL FEATURES			
Voltage	24 Vdc - Other voltage on request		
Power consumption	2W	6.5W	6.5W
Duty cycle	ED 100%		
Electrical connection	Micro Industrial Standard pitch 9.4 mm	EN 175 301-803-B pitch 11 mm	EN 175 301-803-B pitch 11 mm
